SUMMARY

Highly motivated IT graduate specializing in Artificial Intelligence and Machine Learning. Proven expertise in model training and building advanced Agentic AI solutions. Hands-on experience developing e-commerce platforms and data-driven technical projects. Equipped with intermediate Cybersecurity skills to develop secure and resilient AI models. Proficient in Python frameworks, including Django, PyTorch, and Scikit-Learn. Committed to leveraging dual expertise in AI and security to drive innovative engineering.

TECHNICAL EXPERTISE

- **Core Languages:** Python, JavaScript, HTML5, and CSS3.
 - **Web Frameworks:** Expert-level development using Django for scalable e-commerce and web solutions.
 - **Data Science:** Extensive experience in data analysis using NumPy, Pandas, and Scikit-Learn.
 - **Machine Learning:** Proficient in model training and deep learning using PyTorch.
 - **Advanced AI:** Specialized in developing and deploying Agentic AI solutions.
 - **Security Tools:** Intermediate knowledge of vulnerability scanning and testing with Nessus, Burp Suite, and OWASP ZAP.
-

PROFESSIONAL EXPERIENCE

Azure AI & Machine Learning Trainee

JAN 2026 - FEB 2026

- **Built AI Models:** Used PyTorch and Scikit-Learn to create and train smart models that can make predictions from data.
- **Cleaned & Analyzed Data:** Used NumPy and Pandas to organize messy data and find important patterns before using it in AI.
- **Built Web Apps for AI:** Used Django and Flask to create websites where users can interact with my AI models easily.
- **Used Cloud Tools:** Worked with Microsoft Azure to learn how to host, manage, and run AI projects on the internet.
- **Safe Coding:** Applied my Cybersecurity knowledge to make sure the AI projects were safe from hackers and digital threats.

Certified Ethical Hacker (CEH) Trainee

AUG 2025 - NOV 2025

- **Automated Scanning:** Used Nessus to automatically scan entire networks to find weak spots and outdated software.
- **Web Security Checks:** Used Burp Suite and OWASP ZAP to run automatic tests that find bugs and holes in websites.
- **Fast Network Mapping:** Used Nmap to quickly and automatically list all devices and services running on a network.
- **Testing Defenses:** Used Metasploit to automatically test if a system can block known hacker attacks.

- **Monitoring Traffic:** Used Wireshark to watch network data in real-time and stop suspicious activity automatically.
-

Projects

Project 1: Twitter Sentiment Web App

- Built a Python model to analyze Twitter data and detect emotions (Positive/Negative).
- Created a Flask web app where users can type text and see instant results.
- Cleaned raw data using NLTK to make predictions more accurate.

- **Project 2: E-Commerce Front-End**

- Designed a clean, modern website for online shopping.
 - Developed custom headers, footers, and product layouts.
 - Ensured the site works perfectly on both mobile phones and desktops.
-

EDUCATION

BS in Information Technology

UNIVERSITY OF PUJNAB ,LAHORE

CERTIFICATOIONS

- **Certified Ethical Hacker (CEH)** – Corvit Institute Gulberg
- **AI & Machine Learning Specialization** – TEEVTA College Lytton Road ,Lahore
